

Suede Labs AI

SEO.SUEDEAI.AI · FORWARD DEPLOYED ENGINEERING · FULL-STACK GEO

# AI engineering, deployed inside your operation.

We build and run AI agents. We capture what ChatGPT, Perplexity, Gemini and Google say about you, repair the pages they read, pitch the press they quote, and date what we find.

# Your customers now ask a machine first.

Founders, executives and marketing leaders arrive with the same finding: their company is absent or misrepresented in AI-generated answers. The pages the engines read are stale, the entity records disagree, and nobody dated what was said.

4

answer engines shaping the buying decision: ChatGPT, Perplexity, Gemini and Google

0

dated records of what they said about you, in most companies we open a file on

*What a dated capture looks like. The same discipline applies to every client category.*

# Six lines of work, one firm.

01

## Full-stack GEO

Capture what the engines answer about your category, dated and screenshotted, then repair the pages and entity records those answers are built from.

02

## Press and reputation

The founder story, the newsroom, the pitch and the outreach behind coverage. Every placement filed as an exhibit engines can quote back.

03

## Entity records and search

Knowledge panels, entity graphs, third-party records and the classic technical repair, kept consistent wherever a machine looks you up.

04

## Managed AI agents

Named agents built, run and kept tuned by Suede Labs AI: call review, lead qualification, script consistency, PR rebuilds. You watch the run, we hold the KPI.

05

## AI operations

Automation placed where it earns its place, inside written guardrails, with a human owner and one agreed number on each lane.

06

## Forward deployed engineer

An engineer inside your operation on a fixed clock. Triage first, sorting what is broken from what is merely loud, then redirection toward the work that pays.

# Capture. Repair. Pitch. Date.

Generative engine optimization is not a keyword list. It is a chain of custody from what an engine says today to what it reads tomorrow.

01

## Capture

Screenshot and date what ChatGPT, Perplexity, Gemini and Google answer for the category and the brand.

02

## Repair

Fix the pages and entity records the answers are built from: schema, canonicals, crawler access, knowledge panels.

03

## Pitch

Put the founder and the record in front of the press the engines quote, so the citations exist.

04

## Date

Re-capture on a schedule. Every public claim links to a receipt a reader can open.

---

# AI agent management, watched live while the work runs.

Clients watch it run in real time without having to adjust or touch anything. Their job is watching; Suede runs the rest. An operator's practice, not a licence: the call centers Jason built, ran and exited, and the sales scripts still in use across that industry, are encoded into the agents.

## AGENTS

### Managed AI agents

Call review, lead qualification, script and rebuttal consistency, PR rebuilds. Visible step by step while a run happens.

## OPS

### AI operations

Digital operations mapped lane by lane, bottleneck fixes first. Guardrails, owners, trackable KPIs.

## PEOPLE

### Human amplification

A platform of human marketers who read a client's content and carry it into the feeds their own audiences sit in.

## FDE

### Forward deployed engineer

Serious triage and redirection on a fixed clock. A ranked list of what to fix, and the fixes.

The agents are built and run in Suede Agent Studio, where a client opens a flow and watches it execute.

# Every claim we publish opens a receipt.

| PUBLIC RECORD · AS OF SEPTEMBER 2026              |               |
|---------------------------------------------------|---------------|
| USPTO provisional patent application              | 63/947,120    |
| Pull requests merged across external repositories | 47 · 42 repos |
| Jest · virtual mock module isolation fix          | #16296        |
| Adobe React Spectrum · useShowFocusIndicator hook | #10426        |
| Backstage · catalog graph page configuration fix  | #35102        |
| Hardhat · chain descriptor cleanup                | #8522         |

Each line opens the merged pull request, accepted by that project's own maintainers. The count includes 26 substantive code or documentation contributions and 21 accepted listings of Jason-owned work, plus one public Linux kernel USB/IP contribution.

# Retainer for the visibility work. A fixed clock for the engineering.

## RETAINER

### Full-stack GEO

- Dated captures across four engines
- Page and entity-record repair
- Press pitch and newsroom
- Monthly re-capture and receipts

## RETAINER

### Managed agents & AI operations

- Named agents, built and run by Suede
- One agreed KPI per lane
- Written guardrails and a human owner
- Watch the run in Agent Studio

## FIXED CLOCK

### Forward deployed engineer

- Triage: broken vs merely loud
- A ranked list of what to fix
- The fixes, shipped
- Consulting is the entry motion only

Each engagement is scoped and priced in a reply. No public price ladder, no guarantees we cannot date.

# Built for the people who just found out what ChatGPT says about them.

- Founders and executives whose category is answered without them
- Marketing leaders who need evidence before an engagement, not a pitch
- Sales-led operations that want agents run for them, with one number per lane
- Teams that need a serious engineer inside the operation for a few weeks

## The Screenshot

The book behind the practice, read free on the site: why the engines say what they say, and the page that owns the exact question “why does ChatGPT recommend your competitors?”
